

ENVIRONMENTAL POLICY

In order to meet all environmental requirements of our stakeholders and interested parties; Advanced Biomedical has implemented an integrated management system that incorporates environmental criteria that must be conformed to.

ISO 14001 has been used as a guide regarding the issues that have been addressed. Accordingly our system procedures and Standard Operating Procedures (SOP's) include requirements to minimise or eliminate any environmental aspect and their impacts that may have a detrimental effect.

The Quality Manager has the authority and responsibility to ensure that we meet all environmental obligations. We encourage all staff to support us in this regard.

To ensure suitability and improvement in our systems, the environmental aspects of our system are included in our audit program.

Responsible environmental management is an important part of our business.
